RE: EZSPEC/DARGAL Version 60.490

This document accompanies the distribution media for DARGAL Version 60.490.

DARGAL is now being compiled at code file versions 51 through 52. This makes DARGAL compatible with MCP versions up to 53. If you are generating DMS FDs up to version 53, all required libraries are also included with this release.

In addition to the new DARGAL 60.490 Host Release, the following other product releases are also now available:

URSA CLIENT 3.01.0043

MICROFILTER FOR TCP/IP 4.10.0004

MICROFILTER FOR WINDOWS 3.30.00005

It is suggested that these newer client versions of URSA and the MICROFILTERS be used with the new Host version, but that is not required.

The MICROFILTERS were modified to correct the "no micro memory available" problem experienced by some of our customers. If you were one of the sites experiencing this problem we recommend that you install the latest MICROFILTERS.

All software updates are available at our website:

www.decisionsupport.com

If you have any difficulty in obtaining any of these upgrades, please contact Client Services by phone at (704) 845-1000 or Email cs@decisionsupport.com
