RE: DARGAL-URSA Host Version 60.500

URGENT NOTE: If you are using DARGAL with MCP 54.1 currently, or are planning to upgrade to MCP 54.1, the minimum recommended MCP Level is 54.1A.24. If you run any DARGAL Host Version with an MCP 54.1 Level less than 54.1A.24, there is a strong possibility that you could encounter a De-Allocate Error that would cause a system crash. The PLE for the fix is 18764288 if you want to see the details of the problem at the Unisys Support site.

Qualified Later Compiled Code Versions:

The DARGAL 60.500 software, downloadable from the Decision Support Website, is now being compiled at code file version 53 (For those users needing DARGAL 60.500 compiled at a version earlier than MCP 53, contact us at Client Services). This makes DARGAL compatible with MCP versions at least up to 55. If you are generating DMS FDs up to version 54, all required libraries (OBJECT/DARGAL/FDFROMDMS) are also included with this release.

Obtaining The DARGAL 60.500 Download:

Set your browser to www.decisionsupport.com

Choose SOLUTIONS on the Menu Bar

Then choose BUSINESS INTELLIGENCE

Then choose URSA & DQ PRODUCTS

Next choose PRODUCT UPDATES

Double-click the link for DARGAL Version 60.500 to download

Once that has been downloaded and Win Un-zipped you will see 2 files:
D6050053.dzp {To be used with DARGAL's Unzip Command}
D6050053.wrp {To be used with UNISYS' Unwrap Command}

If you have any problem Unzipping/Unwrapping the file, please contact Client Services.

De-Implementations:

Beginning with DARGAL 60.500, you will see De-implementation warning messages stating that the following will be de-implemented in DARGAL 61:

- Kanji Character Set
- B-20 MicroFilter
- Macintosh MicroFilter
- HFS TCP/IP Support
- Upstanding Systems TCP/IP Support

If you have any questions about DARGAL Version 60.500, please contact Client Services at (704) 845-1000 or cs@decisionsupport.com

Thank you.

Sincerely,
Decision Support Client Services
