RE: URSA Version 3.01.0004

This document accompanies materials related to URSA Version 3.01.0004. This version contains the features described below. We recommend that you use this latest version of URSA in conjunction with one of the new versions of the Micro Filter (either the Micro Filter for TCP/IP Version 4.10.0001 or the Micro Filter for Windows Version 3.30.0002). We also recommend using Host Version 60.260 or later.

Removing defines

A **Remove** button is now available in the **Define Virtual Field** dialog box.

Support for Microsoft security templates

The locations in which the URSA files are stored have been changed with URSA 3.01 and later in order to comply with Microsoft recommendations. The changes that were made allow a non-administrative user to work with URSA, but not access areas or files he or she should not access. This process adheres to Microsoft's security template and makes the workstation less vulnerable to security risks.

If you have installed URSA previously, the installer migrates your existing files from their former location to the new location shown in the chart that follows. If you have more than one version of URSA installed on your computer, the installer migrates only the most recent version. During the migration process, the installer moves the existing files into a new folder called **3.00 URSA Data Archive** under the folder where the latest version of URSA was installed. All the necessary files (.ini, .txt, .mas, .dev, .tab) are then copied to the new location (see chart that follows).

Files used in URSA

The following types of files are used in URSA.

File Type	Extension
table files	*.tab
master files	*.mas
config files	*.ini
script files	*.txt
activity file	*.txt
spec files	*.spc
program files	varies

The locations in which these files are stored varies depending on the version of Windows you are using.

Version	File Type	Location
XP, 2000, and 2003	table, master, config, script, and activity files	<sysdisk>:\documents and settings\ <username>\application data\ decision support inc\ursa
	spec files	<sysdisk>:\documents and settings\ <username>\my documents\URSA infoSuite
	program files	They will be installed in the folder specified during the installation process.
NT	table, master, config, script, and activity files	<sysdisk>:\<windir>\profiles\ <user name>\application data\decision support inc\ursa
	spec files	<sysdisk>:\<windir>\profiles\ <username>\personal\URSA infoSuite
	program files	They will be installed in the folder specified during the installation process.
98 (specific user)	table, master, config, script, and activity files	<sysdisk>:\<windir>\profiles\ <username>\application data\ decision support inc\ursa
	spec files	<sysdisk>:\<windir>\profiles\ <username>\my documents\URSA infoSuite
	program files	They will be installed in the folder specified during the installation process.
