

# URSA infoSuite

Connecting your  
Unisys MCP Computer  
to a world of information

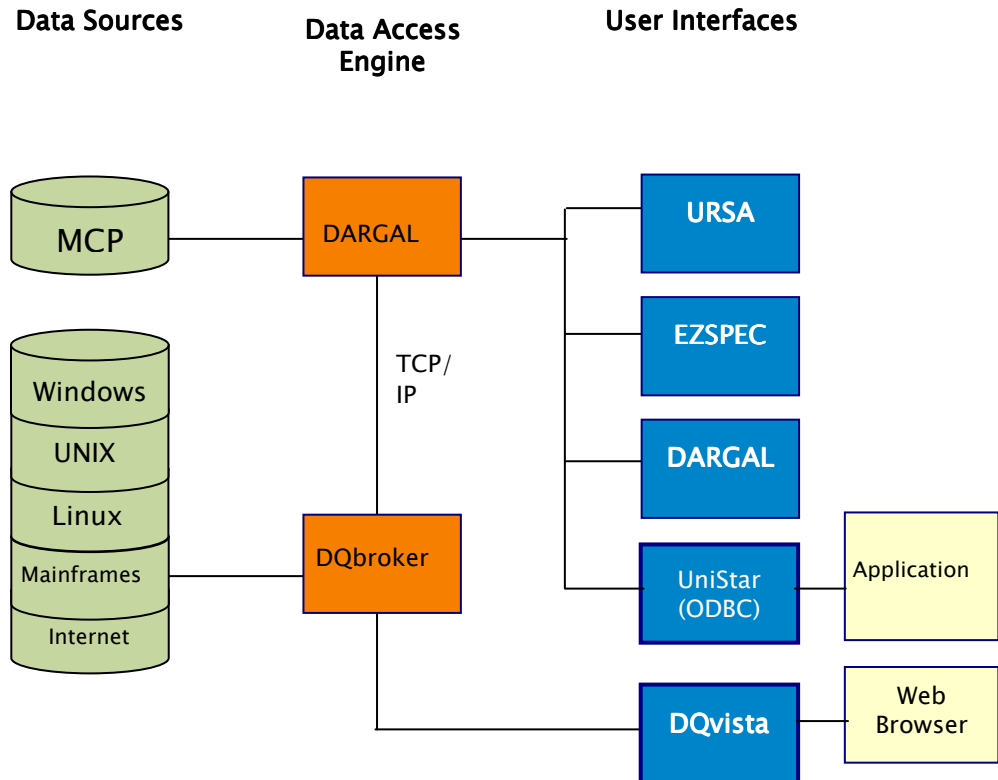

## Power and Flexibility

The URSA infoSuite provides a comprehensive set of data access and reporting tools. It provides you a variety of interfaces to your corporate data that can reside on Unisys MCP operating system computers. The URSA infoSuite allows you to choose how you access your enterprise data. It provides the power of a robust scripting language (DARGAL) for programmers and developers. It also allows you to use a Windows-based, user friendly interface (URSA) or UniStar, an ODBC driver that lets you use applications like Impromptu, Access, Excel, Powerbuilder, Visual Basic and many more.

In addition, the URSA infoSuite provides centralized administration and data repository -- you maintain *one* set of tables for the various URSA infoSuite components. You can automate the maintenance of these tables. The URSA Admin program is a Windows-based, graphical tool that allows administrators to customize individual views of data for each user.

## URSA infoSuite

## URSA *infoSuite* Components

The URSA *infoSuite* includes the following standard components:

- URSA: Windows-based GUI
- UniStar (ODBC driver)
- EZSPEC: Menu-based, forms mode
- DARGAL: Scripting language
- URSA Administrator
- URSA *infoSuite* Manager – manage admin functions with a Windows-based, graphical user interface instead of EZINSTALL. (EZINSTALL is still an option.)
- DQbroker is an optional component for data access and reporting using Windows Servers, UNIX, LINUX, and other mainframe databases.

## Features

The URSA *infoSuite* provides the following features:

- Supports access to DMSII, KEYEDIO, ISAM, and sequential files on Unisys MCP operating system ClearPath computers
- Provides a single file definitions system for all reporting software: URSA, EZSPEC/DARGAL, and UniStar
- Supports native access to Oracle, Sybase, Informix, Progress, and DB2 (via DQbroker)
- Supports access to any 32-bit ODBC-compliant database like SQL Server, Access, and others on Windows servers or workstations
- Provides automated generation of tables for DMSII databases
- Provides a Windows-based GUI mainframe reporting tool
- Includes complete data access security at the table, field, and record level
- Allows customization of tables and fields
- Provides SQL monitor for Windows based ODBC queries
- Provides administration of user profiles and security using a Windows-based GUI administrative tool
- Allows pre-defined joins
- Allows user to define joins dynamically
- Allows users to define calculated fields
- Supports the joining of tables from different databases on multiple platforms
- Provides networking capabilities to all output devices for the distribution of reports and data within the enterprise

EZSPEC/DARGAL, UniStar, DQvista and URSA *infoSuite* are registered trademarks, and URSA Administrator and DARGAL Gateway Interface are trademarks of Decision Support Inc. All other brand names and product names are trademarks or registered trademarks of their respective owners, and are used with no intention of infringement on the trademark.

## Hardware Platforms and Databases

URSA *infoSuite* provides access to Unisys MCP operating system ClearPath computers and data on Windows Server, UNIX and LINUX platforms.

In conjunction with DQbroker, URSA *infoSuite* provides access to data on UNIX, Windows Server, Linux, and mainframe computers throughout the extended enterprise.

New platforms and database management systems are added on an ongoing basis, so call to get specific, up-to-date information regarding your enterprise needs.
